## Hot Water Pressure Washer for Sanitization

Part Number: ZJOB2433

Kerrick has designed an effective and user friendly hot water sanitizing system, ideal for industries where hygiene is a priority. Equipped with a Firebox 350 boiler that heats water up to 140°C the Kerrick Hot Water Sanitizer has a pump and motor kit operating at 3000 psi with a flow of 21l/m. The entire system is mounted onto a galvanized skid along with the sanitizing chemicals which are injected during operation. The combination of chemical injection with hot water and steam means operators not only cut through dirt quicker, but most importantly nasty microbes and bacteria are destroyed leaving a sanitary and safe environment

### Specifications

**Flow:**

21 l/min

**Motor Type:**

Electric

**Motor Power:**

7.5Kw

**Voltage:**

3 Phase

**Pump Make:**

Hawk or Interpump

- Combines hot water and chemicals ensure sanitization
- Heats water to 140°C which helps to break down dirt quickly and to kill off microbes
- Skid can be either kept on site or mounted onto a truck for added mobility
- Twin guns and lances allow two operators to work at the same time
